

DSI Underground is a manufacturer and supplier of ground support and ground stabilization products for the mining industry.

Industrial Electrician- Sturgeon Falls, Ontario

Sturgeon Falls serves as the main administrative and commercial center for the Municipality of West Nipissing. The region has a rich francophone history, and approximately 60 per cent of the population speak French as a mother tongue. West Nipissing is the traditional territory of the Ojibway tribe of the Nipissing First Nation under the Robinson-Huron Treaty. Its convenient location on the Trans-Canada Highway 17 between North Bay and Sudbury confers upon the town a wealth of choices in commerce, health care, post-secondary education. The area offers easy access to wilderness locations and has the welcoming spirit of an area steeped in the traditions and the culture of Northern Ontario.

DSI Underground Canada Ltd. (DSI's) scope of business includes the manufacturing and supply of ground support equipment for the mining industries. Its systems are known worldwide for innovation, quality, and reliability. DSI – Sturgeon Falls is the company's largest facility in Canada and is currently seeking an enthusiastic and dependable individual to join our Maintenance team. You will be responsible for installing, maintaining, modifying, and repairing industrial electrical systems/equipment and all types of industrial electronics related to product manufacturing, including basic problem solving and troubleshooting.

Reports to: Plant Manager

Responsibilities include:

- Performing maintenance, repair and troubleshooting duties on electrical systems, instrumentation and controls, and electronics
- Performing mechanical duties related to instrumentation and controls
- Performing scheduled maintenance inspections and repairs of production and packaging equipment.
- Performing emergency/unscheduled repairs of production and packaging equipment
- Reading and interpreting equipment manuals, engineering drawings, wiring and circuit diagrams, schematics, logic prints, work orders and other information sources to perform required maintenance and servicing
- Preparing preventative maintenance schedules
- Performing other related duties as required.

The successful candidate must possess the following qualifications and skills:

- Grade 12 Diploma or GED
- Journeyman Electrician's Certificate
- Electronics Technology Diploma (preferred)
- PLC's knowledge would be considered an asset
- Legal entitlement to work in Canada
- 2-3 years' experience troubleshooting in an industrial environment and previous experience in a production or manufacturing facility

- In-depth knowledge of electronics and electrical equipment
- Familiarity with hydraulics and pneumatics
- Ability to communicate effectively using the spoken word in English
- Understanding of common workplace safety and environment practices
- Strong leadership, analytical and problem-solving skills
- Positive attitude and work ethic
- Ability to work shift work and meet attendance/punctuality requirements
- Ability to work effectively in a team environment and take responsibility for work performed and duties carried out.
- Physical ability to continually handle objects weighing up to 20 lbs. and occasionally up to 50 lbs.
